Reliable Power

Electronic Environments Corporation (EEC) has focused on delivering reliable, quality services to mission critical facilities in the IT and telecommunication markets for **close to 25 years**. Our telecom clients demand network reliability, because uptime is directly related to their ability to generate revenue.

DC power systems are at the heart of communication facilities. At EEC we understand the critical nature of these systems, and the workmanship needed to keep them running efficiently and effectively. Our DC Power experts pay special attention to the critical details that go into designing and installing reliable power systems. **Our goal is to keep your sites up and running by providing outstanding service and solutions.**

Technical Expertise

EEC has a team of highly skilled technicians experienced in installing DC power systems complete with a full range of equipment and engineering resources. Our technicians are **Level I through Level IV installers** and are trained and certified by Tyco/Lucent, Marconi/Emerson Network Power, and Peco II; including installation and service experience with battery

systems from C&D, DEKA and GNB. This platform independence allows us to offer our clients vendor neutral power solutions that best fit their network requirements.

EEC performs all work in accordance with Belcore/Telcordia and customer standards and quality audits are performed over the life of the project.

24 x 7 Service & Support

EEC has regional repair sites, staffed by fully trained technicians. We offer 24x7 emergency and preventative maintenance services; ensuring our clients have reliable power over the lifetime of their systems.

Protecting Your Network

- **Wireless Networks**
- **Broadband Head Ends**
- **Central Office**
- **Outside Plant Applications**
- **Switching & Transmission Facilities**
- **Phone Switch**

Because You Can't Afford Downtime

Electronic Environments' unique end-to-end approach to infrastructure management was developed specifically to meet the demanding needs of 24x7 telecommunication operations. EEC understands the rigorous demands of the telecommunication marketplace and has developed the solutions to protect them. From site design, build and monitoring to operations and maintenance solutions, we **continually deliver great performance and quality** for your mission critical infrastructure.

Competitive Advantages

- Experienced DC Power installation technicians
- Licensed electricians
- Continual technician education
- Site optimization/design by professional engineers
- Environmental and safety compliance programs
- All work performed in accordance with Belcore / Telcordia engineering and installation standards
- All battery work completed in accordance with manufacturer guidelines and IEEE1187-2002 and IEEE484-2002 VRLA and flooded battery installation practices
- 24 x 7 Emergency Service - 2 to 4 hour response
- Predictive maintenance and remedial repair
