

Data Center

Building Exterior

Customer Quote:

"The move to Ft. Meade was a great success from an IT perspective. The dedicated efforts of your staff in up front planning and ongoing support through implementation attributed to this success." Ann Johnson, Assistant Deputy Director Information Technology & Communication Directorate and CIO

Project Details

Relocating the Data Center without any glitches was the Defense Security Services (DSS) primary concern. Electronic Environments Corporation (EEC) offered technical advice, support in making computer room design decisions, and provided movers with an accurate picture of what components needed to be moved and when. The process involved preparing a site evaluation report of the data center, architectural drawings, producing detailed hardware equipment lists, and an electrical design package for the computer room. The EEC team worked closely with DSS's Information Technology group to ensure an expedient successful transition.

- Information, technical advice, and support in making computer room design decisions
- Site evaluation report
- Architectural drawings and electrical design package for computer room
- Migration and relocation of two satellite facilities to one new data center
